VEHICLE SERVICE CENTER MANAGEMENT SYSTEM

PROJECT PROPOSAL

PREPARED FOR	Amila - A S Motors
PREPARED BY	Netsyra
DATE	29 October 2026
PROPOSAL REFERENCE	VSC-2026-1029

A modern web-based solution for service operations, inventory, invoicing, reporting and customer records.

NETSYRA
CONNECTING THE DIGITAL FUTURE

1. Project Overview

We propose to develop a customized Vehicle Service Center Management System to streamline daily operations, manage customer and vehicle records, maintain service history, control spare parts inventory, and monitor financial transactions.

The system will be developed using PHP, MySQL, HTML, Tailwind CSS and JavaScript, with a clean responsive interface and a compatible icon library. It will be accessible through modern web browsers and designed for efficient day-to-day use.

2. Project Objectives

- Digitize vehicle service center operations.
- Maintain accurate customer and vehicle records.
- Retrieve complete service history using vehicle registration numbers.
- Manage spare parts inventory and stock movements.
- Generate professional service invoices.
- Monitor income, expenses, and inventory levels.
- Improve efficiency and reduce manual record-keeping.

3. Main System Features

A. Dashboard

- Overview of daily service activities.
- Customer, vehicle, and invoice summaries.
- Inventory and low-stock notifications.
- Income and expense summaries.

B. Customer Management

- Register and update customer information.
- Store contact details and customer history.
- View vehicles associated with each customer.

C. Vehicle Management

- Register vehicles using registration numbers.
- Store vehicle make, model, year, and other relevant details.
- Access complete service history for each vehicle.
- Record service dates, mileage, repairs, parts used, and service notes.

D. Service Management

- Create service job records.
- Record vehicle inspections, repairs, labor charges, and parts used.
- Track service status.
- Schedule future service dates and mileage-based reminders.

E. Spare Parts Inventory

- Add, edit, and manage spare parts.
- Track stock quantities and unit prices.
- Record stock purchases and usage.
- Manage stock movements.
- Display low-stock alerts.
- Maintain supplier information.

F. Invoice Management

- Generate service invoices.
- Include labor charges, spare parts, discounts, and applicable taxes.
- Record payments and outstanding balances.
- Print invoices for customers.
- Maintain invoice history.

G. Supplier Management

- Register and manage suppliers.
- Record spare parts purchases.
- Review supplier and purchase records.

H. Reports and Financial Management

- Daily, monthly, and yearly income reports.
- Expense records and summaries.
- Service and invoice reports.
- Spare parts stock reports.
- Low-stock reports.
- Outstanding payment summaries.

I. User and Security Management

- Secure login and logout.
- Role-based access for administrators and staff.
- Password hashing and session security.
- Input validation and protection against common web vulnerabilities.

J. Backup and Restore

- Database backup functionality.
- Database restoration from valid backup files.
- Basic backup and recovery guidance.

4. Technology Stack

Component	Technology
Backend	PHP
Database	MySQL
Frontend	HTML, Tailwind CSS, JavaScript
Icons	Font Awesome or compatible icon library
Hosting	Compatible PHP and MySQL web hosting
Interface	Responsive web application

5. Project Deliverables

1. Functional web-based management system.
2. MySQL database and database structure.
3. Customer, vehicle, service, and inventory modules.
4. Invoice generation and printing.
5. Reports and dashboard.
6. User login and role management.
7. Backup and restore functionality.
8. Installation and configuration.
9. Testing and bug fixing before handover.
10. Basic user guidance and handover documentation.

6. Project Cost

Description	Amount (LKR)
System design and development	25 ,000
Database and inventory management	5000
Service records and invoice management	5000
Testing, deployment, and handover	-
TOTAL PROJECT COST	**35,000**

TOTAL: LKR 35,000.00

This quotation is based on the features and scope described in this proposal. Any additional features or substantial changes requested after approval may be quoted separately.

7. Payment Terms

Milestone	Percentage	Amount (LKR)
Advance Payment — upon project confirmation	40%	-
Progress Payment — upon demonstration of main modules	30%	-
Final Payment — upon final approval and handover	30%	-

Development will commence after confirmation of the project scope and receipt of the advance payment.

8. Estimated Development Timeline

Estimated development period: 4–6 weeks, subject to timely feedback, testing, and client approval.

Phase	Estimated Duration
Requirements confirmation and system design	3–5 days
Database and core modules	1–2 weeks
Inventory, services, and invoicing	1–2 weeks
Reports, security, and backup	4–6 days
Testing, deployment, and handover	3–5 days

9. Warranty and Maintenance

- A 30-day bug-fixing period is included after final handover for issues related to the agreed scope.
- New features, major modifications, third-party service fees, and ongoing maintenance are excluded from the project price unless agreed separately.
- Optional ongoing maintenance can be arranged at an agreed monthly rate.

12. Acceptance and Approval

By signing below, both parties confirm their agreement with the project scope, price, payment terms, and conditions described in this proposal.
